

Hard at work on Shoreham harbour

Southern Cranes have recently been involved in a few projects on Shoreham Harbour.

John Parker & Son Ltd (Parkersteel) are building a new distribution and processing facility on Shoreham Port, which could see 280 new jobs created in the future.

The massive Terex Demag AC200, with a lifting capacity of 200 tonnes was used during crane gantries' construction at Parker's Terminal. You can find more information about the terminal on the Shoreham Port web-site;

<http://www.shoreham-port.co.uk>.

We also had one of our new Tadano Faun ATF90G working just down the road at the Cemex site, along with the popular Terex Demag ATT400. Cemex also used the Manitou MT1030 fork lift truck and a Genie S-65.
