SOUTHERN GRANES & ACCESS

Lifting capacities

Working on sites often means difficult, constricted conditions. It is often not possible to extend all the supports evenly in crane use locations.

Liebherr has developed a unique new system with which every individual crane support can be extended to any length and the crane operation is then made safe by the load moment limiter within the LICCON control – this is called the **Variable Supporting Base**.

The extension length and support force of every single support is measured and the maximum lifting capacities for this situation are calculated by the crane control.

This means that for the first time it is possible to work safely with any support base and accidents caused by incorrect operation can be avoided both during the setup process and when handling loads.
